

# Appendix E - 2050 Demographic Forecasts

---

For this 2050 RTP update, NJTPA updated and extended the demographic (population, household, and payroll employment) forecasts for the region. These forecasts were created in consultation with our regional and county partners and used NJTPA's updated Demographic and Employment Forecast Model (DEFM) to help allocate county level forecasts to the local level. The process for developing forecasts was split into two processes: the creation of county-level forecasts and the allocation of those forecasts to a Traffic Analysis Zone (TAZ) and municipal level.

## **Covid-19 Adjustment**

The forecasting team had completed initial 2050 forecasts for employment when the Covid-19 pandemic hit. It was clear to the project team that employment forecasts had to be adjusted for the pandemic, however the length and degree of impact was and is still unknown. While the pandemic is unique, the team examined the speed and degree of economic recovery from previous shocks to the economy such as the September 11<sup>th</sup> attacks and the Great Recession caused by the financial meltdown in 2008. After many discussions, forecasts in the shorter term were adjusted lower with 2020 showing a severe decrease while 2025 and 2030 showed recovery. Long-term forecasts (2035-2050) were also mildly adjusted lower as well as a slight delay in the overall speed of the recovery was built into the forecasts. Even with these adjustments, the NJTPA and its partner agencies acknowledge the uniqueness of the pandemic situation's impacts and, therefore, the difficulties in forecasting growth in these highly uncertain times.

## **County-Level Forecasts**

The county-level forecasts were based on updated modeling completed in August 2020 by the New York Metropolitan Transportation Council (NYMTC) in partnership with the NJTPA.

Employment forecasts were created by first creating a 2017 benchmark based largely on the Bureau of Labor Statistics (BLS) Current Employment Statistics with other data sources (e.g. Census data) used to supplement the results based on known deficiencies in the BLS data. Forecasts were created by averaging the third party forecasts from three sources: IHS Markit, Moody's, and the Bureau of Labor Statistics (BLS) and applying the changes derived from these forecasts to the benchmark. Population forecasts were derived from a cohort component analysis based on estimates of births, deaths and net migration. The analysis looked at current rates, recent trends and labor demand, to help determine the appropriate rates of change for each of these population components. Household forecasts were based on applying historical age-based household formation rates to age-based population estimates.

Except for New York City, NYMTC's analysis did not consider land use constraints. Therefore, after consultation with county planners and regional agency partners, the resultant county level forecasts

were shifted between counties based on known limitations as learned from previous forecast efforts. Recent development pattern changes (e.g., high growth in Urban Core, lower growth in west) were incorporated during this adjustment process along with the recent overall slowdown in statewide and regional growth. Testing was performed to examine the travel pattern implications of the forecasts, particularly Trans-Hudson travel.

The county-level forecasts were sent to county planners and regional agencies in June 2020 with final agreement reached in August 2020.

### **Allocation of county-level forecasts to the TAZ and Municipal levels**

Once the county-level control total forecasts are established, they need to be allocated to the TAZ and municipal levels. NJTPA uses the Demographic Employment Forecast Model (DEFM), enhanced in 2011, to help with the allocation process. The model uses historical census data, land use data, anticipated development data, density estimates, and travel demand model information, including highway and transit accessibility measures, to allocate growth in the region. NJTPA incorporated known development and parcel land characteristic information to help with the allocation process.

The allocation process is iterative and involves a great deal of GIS and spreadsheet analysis. Since the available data is different among counties, the analysis process varies slightly between counties but, in general, involves estimating current land uses (including eliminating preserved areas) and estimating residential and employment densities that can be applied to future growth in available vacant land and redevelopment areas. The DEFM allocates growth based on the characteristics of each TAZ, (e.g., historical growth rates, available land, transit/highway connectedness). Known developments are also considered in the allocation process. NJTPA staff along, with county planners and regional agencies, evaluate the model results for reasonableness and adjust the output when necessary. Agreement is reached when all reviewers find the forecasts reasonable.

The following tables show the updated 2050 household, population and employment forecasts by county and municipality.

County	2015 Population	2050 Population	Annualized % Population Change 2015-2050	2015 Household	2050 Household	Annualized % Household Change 2015-2050	2015 Employment	2050 Employment	Annualized % Employment Change 2015-2050
